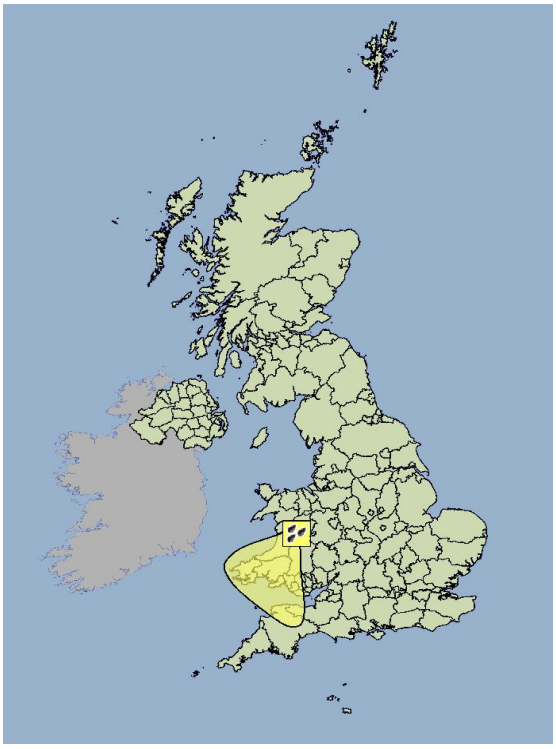
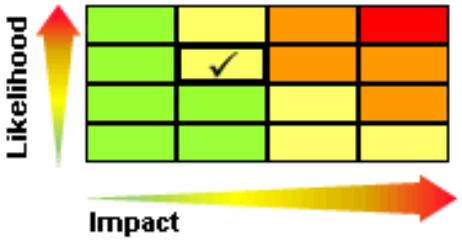
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system will move across the United Kingdom today bringing a spell of persistent and at times heavy rain to parts of Wales and southwest England. 20 to 30 mm of rain is expected to fall quite widely while over higher ground 50 to 60 mm is possible. Given the already wet ground from recent rainfall this is expected to lead to some surface water flooding in places. The rain will die out from the west this evening.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:30 on Sun, 21st Jan 2018** until **18:00 on Sun, 21st Jan 2018**

Outbreaks of rain today will become heavy and persistent at times before dying out from the west during this evening.

Spray and flooding will probably lead to longer journey times by road, bus and train. It is also possible that flooding of a few homes and businesses will occur.
